Technical Standard – Energy and Carbon Management

1. INTRODUCTION

Vedanta acknowledges the global concern on climate change and recognizes that concerted and sustained global action is required to reduce the scale of the problem and to adapt to its impacts. Vedanta is committed to this effort through our own progressive energy and carbon management programme that forms an integral part of our vision for sustainable development and is consistent with our overall business vision and mission. In recognition of this commitment and in accordance with our energy and carbon policy this Standard aims to facilitate the integration of energy and carbon management into decision making processes for new and existing projects, and to help ensure that all necessary measures are taken to avoid and minimize the carbon emissions arising from our projects. It also sets out the process through which Vedanta will report on its overall carbon and energy management performance.

The assessment and management of impacts of new projects shall be considered as part of the overarching environmental and social impact assessment and therefore this document should be read in conjunction with the *Conducting ESIA to International Standards Technical Standard* for such purposes. For existing projects, reference shall also be made to existing environmental management provisions adopted at a Company and site level.

2. SCOPE

The guidance in this Technical Standard is mandatory and applies to all Vedanta operations and managed sites. The Standard applies to all new and existing projects and is applicable to the entire operation lifecycle (including exploration and planning, evaluation, operation and closure).

3. DEFINITIONS

Definitions of key terms used in this document are shown in the following table.

Term	Definition
Carbon Footprint	For each Vedanta Company, the carbon footprint is the sum of the GHG emissions arising annually across the company's sites, operations and facilities.
CO ₂ e (CO ₂ equivalent)	A measure which takes account of the global warming potential (GWP) of GHGs other than CO ₂ (eg methane), expressed as the equivalent weight of CO ₂ that would lead to the same global warming potential as the weight of that GHG. Methane has a GWP ca. 22 times greater than that of CO ₂ and so each tonne of methane emitted has the same global warming potential as 22 tonnes of CO ₂ .
GHG (Greenhouse Gas) Emissions	Emissions of the six gases that form part of the Kyoto Protocol to the United Nations Framework on Climate Change, namely: Carbon dioxide (CO ₂) / methane (CH ₄) / nitrous oxide (N ₂ O) hydrofluorocarbons (HFCs) / perfluorocarbons (PFCs) sulphur hexafluoride (SF ₆)

Technical Standard – Energy and Carbon Management

Term	Definition
GHG (Greenhouse Gas) Accounting	The systematic collation of GHG emissions information from each site within each Company to enable the Group Sustainability Committee to measure, record and report aspects of GHG emissions associated with its operations and activities.
ICMM (International Council on Mining and Metals)	The International Council on Mining and Metals (ICMM) was established in 2001 and seeks to drive performance improvement through its members which comprise 20 mining and metals companies as well as 30 national and regional mining associations and global commodity associations.
IFC (International Finance Corporation)	Member of the World Bank that finances and provides advice to private sector ventures and projects in developing countries.
Lifecycle	The phases of a Vedanta mining project including exploration, pre feasibility, feasibility, planning, evaluation, operation and closure.
Operation(s)	A location or activity that is operated by a Vedanta Company and is part of the Vedanta Group. Locations could include mines, refineries, ports or transportation activities, wind farms, oil and gas development sites, offices including corporate head offices and research and development facilities.
Stakeholders	Persons or groups that are directly or indirectly affected by a project as well as those that may have interests in a project and/or the ability to influence its outcome, either positively or negatively. This can refer to shareholders, lenders, employees, communities, industry, governments and interested third parties.
Vedanta Company	A subsidiary of Vedanta Group either fully or majority owned that has its own management structure (e.g. Hindustan Zinc Limited, Vedanta Aluminium Limited, Sterlite Industries limited, etc.)

4. PROGRAMME REQUIREMENTS

This technical standard has been prepared in order to manage and reduce GHG emissions arising across Vedanta's sites and operations. It describes mechanisms for monitoring, managing, minimising and reporting GHG emissions across existing or proposed Vedanta activities or operations, and over the entire Vedanta Group.

4.1. General Requirements

All Vedanta subsidiary companies and operation are required to follow the requirements listed below with regards to energy and carbon management.

- a) Arrangements shall be created, implemented and maintained so that the requirements of applicable local, regional, national legislation are complied with.

Technical Standard – Energy and Carbon Management

- b) Arrangements shall also be implemented to ensure conformance to the requirements of the *IFC Performance Standards*. The key IFC provisions are summarised as follows:
- *Performance Standard 1 – Assessment and Management of Social and Environmental Risks and Impacts* – The relevant objectives of this standard are to identify and assess social and environment impacts, both adverse and beneficial, in the project's area of influence; to avoid, or where avoidance is not possible, minimize, mitigate, or compensate for adverse impacts on workers, affected communities, and the environment; to ensure that affected communities are appropriately engaged on issues that could potentially affect them and to promote improved social and environment performance through the effective use of management systems. The key considerations in so far as they relate to this Technical Standard are: the need to undertake a risk and impact assessment (including the consideration of GHG emissions and the risks arising from a changing climate and the project's adaptation opportunities); the need for a management programme of mitigation and performance improvement measures; and monitoring and reporting;
 - *Performance Standard 3 – Resource Efficiency and Pollution Prevention* – The relevant objectives of this standard are to promote more sustainable use of resources, including energy and water; to reduce project-related GHG emissions; and to avoid or minimize adverse impacts on human health and the environment by avoiding or minimizing pollution from project activities. The key considerations in so far as they relate to this Technical Standard are: consideration and use of resource efficiency and pollution prevention principles and techniques during all stages of the project lifecycle, particularly the implementation of technically and financially feasible and cost-effective options to reduce project-related GHG emissions during the design and operation of projects. These options may include, but are not limited to alternative project locations, adoption of renewable or low carbon energy sources, sustainable agricultural, forestry and livestock management practices, the reduction of fugitive emissions and the reduction of gas flaring; and the use of benchmarking data (where available) to provide insights into the relative efficiencies achievable.

4.2. Existing Projects and Operations

- a) All existing Vedanta companies shall create, implement and maintain arrangements for energy and carbon monitoring and management at all locations including but not limited to offices, manufacturing sites, distribution infrastructure, mines, etc.

4.2.1. Energy and Carbon Assessment

- a) All Vedanta Companies shall conduct an energy and carbon assessment for each location which shall take into account GHG emissions of each of the six principal GHG Emissions
- b) Each location's energy and carbon assessment shall quantify direct emissions from the facilities owned or controlled within the physical project boundary and indirect emissions associated with the off-site production of power used by the project. The energy and carbon assessment shall be conducted in accordance with internationally recognised methodologies. Guidance shall be provided by Vedanta Group to ensure that Vedanta Companies undertake these assessments in a consistent manner.

Technical Standard – Energy and Carbon Management

- c) The energy and carbon assessment for each location shall be undertaken annually and shall form a constituent part of Vedanta Group's energy and carbon monitoring process.
- d) Particular attention shall be paid to assessments for locations giving rise to more than 25,000 tonnes of CO₂e annually.

4.2.2. Energy and Carbon Management Plan

- a) An Energy and Carbon Management Plan (ECMP) for each location shall be developed, to identify alternatives and to guide implementation of options to reduce GHG emissions for that location. The scope of the ECMP shall be commensurate with the scale of emissions identified within the location's energy and carbon assessment, and shall focus on areas that are considered core business activities as appropriate.
- b) The ECMP shall identify approaches, measures and options for reducing or offsetting GHG emissions that are suitable for implementation at the site subject to technical and financial feasibility and cost-effectiveness considerations. These measures shall be considered across the lifecycle of the location.
- c) Measures and options for reducing or offsetting GHG emissions within the ECMP may include, but are not limited to:
 - Alterations to project or location design to remove or reduce sources of emissions;
 - Energy efficiency improvements;
 - The adoption of renewable or low-carbon energy sources;
 - Carbon financing;
 - Emissions offsets;
 - Other mitigation measures.
- d) The ECMP shall include provision where appropriate for reducing or offsetting emissions associated with the eventual closure of locations.
- e) The ECMP shall be integrated into the Company or Project Social and Environmental Management Plan.
- f) The ECMP shall also include other items as necessary to ensure conformance with Vedanta's Energy and Carbon Policy.

4.2.3. Legal and Other Requirements

- a) All Vedanta Companies shall identify all relevant local, regional and national legislative requirements on energy and carbon management that are relevant to each of its owned and/or managed operations and facilities.

Technical Standard – Energy and Carbon Management

- b) Arrangements shall be established to ensure compliance with all such requirements, and to surpass them where practicable.
- c) All applicable international conventions shall be identified and complied with in all jurisdictions in which each Vedanta Company operates.
- d) Vedanta shall consider opportunities to reduce and offset GHG emissions beyond the scope of legal compliance and the requirements of international standards.

4.2.4. Research, Innovation and Investment

- a) Each Vedanta Company shall develop and maintain its awareness and knowledge of innovatory techniques and research opportunities that may give rise to GHG emissions reduction opportunities within the ECMPs for which it has responsibility. An annual statement shall be produced showing how the Vedanta Company is considering these techniques and opportunities across its existing operations.
- b) Each Vedanta Company shall work with its value chain to help it to reduce energy consumption and carbon intensity across its operations. An annual statement shall be produced showing what activities of this kind the Vedanta Company is undertaking and the outcomes arising.
- c) Each Vedanta Company shall produce an annual statement showing the investments that have taken place during that year in energy and carbon management techniques, measures and opportunities at existing operations, and the anticipated benefits and outcomes arising.

4.2.5. Measuring and Monitoring

- a) Using the GRI Mining and Metals Sector Supplement each Vedanta Company shall monitor performance in managing energy and carbon emissions.
- b) Each Vedanta Company shall develop performance indicators on the basis of corporate and legal requirements and using the following GRI Mining and Metals Performance Indicators:
 - EN3 – Direct energy consumption by primary energy source;
 - EN4 – Indirect energy consumption by primary source;
 - EN5 – Energy saved due to conservation and efficiency improvements;
 - EN6 – Initiatives to provide energy-efficient or renewable energy-based products and services, and reductions in energy requirements as a result of these initiatives;
 - EN7 – Initiatives to reduce indirect energy consumption and reductions achieved;
 - EN16 – Total direct and indirect greenhouse gas emissions by weight;
 - EN17 – Other relevant indirect greenhouse gas emissions by weight; and

Technical Standard – Energy and Carbon Management

- EN18 – Initiatives to reduce greenhouse gas emissions and reductions achieved.
- c) Each Vedanta Company operation or facility shall also establish arrangements for monitoring its performance against the relevant indicators established by the Company.

4.2.6. Knowledge, Awareness and Communication

- a) Arrangements shall be implemented to support energy technology and process research, resource efficiency techniques, and innovatory institutional initiatives carried out by local, regional and national research groups in order to further knowledge and understanding of such attributes in Vedanta's areas of operation.
- b) Mechanisms shall be created and implemented to provide information and raise awareness among employees, customers and suppliers and other stakeholders to enhance knowledge and understanding of energy and carbon management issues.
- c) Arrangements shall be established for the regular reporting to stakeholders on the Company's management of energy and carbon and the progress towards targets and under Performance Indicators.
- d) Vedanta Companies shall work closely with policy-makers to encourage effective and equitable energy and carbon policies within their sectors of operation.

4.3. New Projects

4.3.1. Relevant Considerations

- a) Vedanta Companies shall undertake all elements of energy and carbon management described under 'Existing Projects and Operations' for new projects that are developed in the future (described under headings 4.2.1 to 4.2.7 above). These elements shall address energy and carbon issues in project design, construction and commissioning as well as operation and closure.

4.3.2. Impact Assessment

- a) For any new project or operation that is planned, an initial pre-design assessment of the energy and carbon emissions implications shall also be undertaken. Where necessary, such an assessment will be included or appended as part of a formal international standard Environmental and Social Impact Assessment (ESIA). Reference shall be made to the provisions of local legislative requirements and to the IFC Performance Standard PS1 on the Assessment and Management of Social and Environmental Risks and Impacts.
- b) For projects that require an ESIA the *Technical Standard on Conducting ESIA to International Standards* shall be followed.

Technical Standard – Energy and Carbon Management

- c) For projects that do not fall within the scope of an ESIA an assessment of energy and carbon emissions shall still be undertaken.
- d) The initial assessment of GHG emissions implications for new sites and operations shall be used to determine the scope for designing in and implementing extended measures and approaches for carbon and energy reduction and efficiency that may not be applicable within previously existing sites and operations. Extended measures and approaches shall be considered in the light of the Vedanta Company's Performance Indicators and appropriate targets for energy and carbon reduction.

4.4. Group-Wide Reporting

- a) The Vedanta Group shall report its energy and carbon emissions using internationally recognised methodologies in its annual Sustainable Development Report and via international forums such as the Carbon Disclosure Project.

4.4.1. Energy and Carbon Emissions Performance

- a) The annual energy and carbon assessment and the associated ECMP for each operation and site within Vedanta Companies shall be calculated and maintained by each Company location. Each Vedanta Company shall draw together and amalgamate annual GHG emissions to develop a company-wide carbon footprint.
- b) The carbon footprint shall be reviewed on an annual basis and updated as required and reported to the Vedanta Group head office.
- c) Each Company shall collate the annual GHG emissions arising from all its facilities and use these to determine Company-level performance goals and emissions reduction targets for the forthcoming year.
- d) The GHG emissions collated by each Company shall be submitted to the Group Sustainability Committee for the purposes of the annual Group management review, performance reporting and continual improvement in accordance with the Technical Standards for *Sustainability Data Management*, and *Management Review and Continual Performance*.

4.4.2. Group-Wide Guidance for Vedanta Companies

- a) Vedanta Group shall provide guidance to Vedanta Companies on the approaches to be taken to the development and management of energy and carbon assessments. This guidance shall take account of internationally recognised methodologies such as those developed by the WBCSD / WRI.

Technical Standard – Energy and Carbon Management

5. ROLES AND RESPONSIBILITIES

Vedanta Resources, subsidiaries, businesses, operations and sites shall ensure that roles and responsibilities for implementing and complying with this Standard are allocated. Key responsibilities shall be included in job descriptions, procedures and/or other appropriate documentation.

6. COMPLIANCE AND PERFORMANCE

Each Vedanta operation shall ensure they comply with the requirements of this standard. Performance against meeting the requirements of this Standard shall be periodically assessed, documented and, where required, reported to Vedanta Group. The assessment of performance shall include setting and reporting on key performance indicators (KPIs) where these have been established at Vedanta Group, Company or local level. The evaluation of performance shall include, as a minimum, confirmation that:

- An energy and carbon assessment is prepared annually by each site and is reported to the Company Head Office.
- An energy and carbon management plan (ECMP) exists for each site and that its provisions are being put into practice
- A carbon footprint is prepared annually by each Company and reported to the Group Sustainability Committee to enable it to fulfil its duties for data reporting and continual improvement.
- Statements of Company actions relating to research, innovation, and investment in energy and low carbon are prepared annually.
- Evidence is available to demonstrate the actions and initiatives taken to monitor and reduce energy and carbon emissions.
- Information and awareness-raising activities have been undertaken among employees, customers and suppliers and other stakeholders to enhance knowledge and understanding of energy and carbon management issues.
