PART-G

In respect of the pollution abatement measures taken up on conservation of natural resources and on the cost of production.

Our aim is to preserve the long-term health of the natural environment affected by our operations. We set and achieve targets that promote effective use of resource and include the reduction and prevention pollution.

- **Air Environment**

Control of Particulate matter Emission

Efficient bag filters with appropriate stacks and online PM analyzers for controlling PM emission are designed, installed at every stack and performance parameters verified and found below 50 mg/Nm³. We have developed facility of CAAQMS (Continuous ambient air quality monitoring station) with the consultation & approval of SPCB.

- **Water Environment**

- We have a long term approach to water management that aims to improve our performance, recognize the significance of water and contribute to sustainable water management. We understand its importance and adopt best practices for making the judicious use of water and conserve it.
- Water generated from various areas is being recycled for gardening after confirming the quality parameters in prescribed limit. We have installed online & continuous monitoring facility in outlet.
- Sewage treatment plant (STP) of capacity 30 KL/D is installed to treat the sewage from unit and 100% treated water is being used for horticulture after confirming the quality parameters in prescribed limit. (STP- Common for Zinc, Lead & Silver)
- Drip irrigation system is provided to optimize the water uses for Horticulture.
- Water meters are provided in various areas of process for measurement and control of water consumption.
- 4 Storm water pond of capacity (2542, 1500, 841 and 750 cum) have been constructed inside the plant premises for storing and conserving the rainwater and further use in gardening and plant operation. In FY23-24, We have reused 14,950 Cu.m rainwater into the process by replacing ground water. (RW- Common for Zinc, Lead & Silver)

- **Waste Management**

- We focus on a '4R' waste strategy – Reduce, Recycle, Reuse and Reclaim and 'Eco-friendly' disposal of process. Waste management plan in place to ensure the proper handling and disposal of waste.

- **Noise**

- Noise generating equipment's are designed with necessary noise controlling measures and being operated to have a noise level in the line with the regulatory requirements. Preventive maintenance of the same is being ensured as per schedule.

PART-H

Additional measures/investment proposal for environment protection including abatement of pollution /prevention of pollution (Common for Zinc, Lead & Silver)

- **Green belt Development**

- Implementation of afforestation program is of paramount importance for Pantnagar Metal Plant. Plantation in more than 33 *per cent* area of plant has been covered by selection of plant species as per MoEF&CC/CPCB/SPCB guideline. Drip irrigation facility has been provided to all the plant saplings to ensure timely and required amount water supply.
- Keeping the pollution issue due to the vehicle movements in mind and with the understanding of the role of plants as bio-filter the following various plant species grown at Pantnagar Metal Plant includes: Neem (*Azadirachta indica*), Amaltas (*Cassia fistula*), Bottle brush (*Callistemon citrinus*), Washingtonia Palm (*Washingtonia robusta*), Curry patta (*Murraya koenigi*), Pipal (*Ficus Religiosa*), Arjuna (*Terminalia Arjuna*), Karanj (*Pongamia pinnata*), Siris (*Albizia lebbek*), Gulmoher (*Delonix regia*), Babool (*Accacia nelotica*), Khair (*Accacia catechu*), Sagwan (*Tectona grandis*), etc. While selecting the plant species for green belt, following points have been taken into considering for improve ambient air quality & variety of plant species:-

- Locally availability
- Dust capturing efficiency
- Noise control
- Absorb Gas emission
- Plants growth
- High Survival Rate
- Canopy shapes
- Origin of plant
- Arid Climate condition
- Feeding & Nesting habitats for birds species

- Green belt also performs carbon sequestration and act as carbon sink and overall help to reduce the pollution and improve the ambient air quality of the surrounding areas.

- We have developed Green belt in our plant with the consultation and approval of DFO (Divisional Forest Officer).
- We have celebrated environment day on 5th June every year.

Total expenditure for FY 2023-24 was 60.36 Lacs (Common for Zinc Lead & Silver) on environment protection including abatement of Pollution/Prevention of pollution. Also various Capex work are under pipeline to improve Environment & Safety at workplace. Total estimated expenditure for environment protection including abatement of pollution /prevention of pollution is Rs. ~73.1 Lacs (Common for Zinc, Lead & Silver) is proposed for FY2024-25 excluding Capex cost.

PART-I

Any other particular for improving the quality of the environment.

Regular monitoring of important and crucial environmental parameters is of immense importance to access the status of environment during plants operation. With the knowledge of baseline conditions, the monitoring program can serve as an indicator for any deterioration in environmental conditions due to operation of the plants and suitable preventive steps could be taken in time to safeguard the environment. Monitoring is an important that of control of pollution since the efficiency of control measures can only be determined by monitoring. Sufficient bag filters with appropriate stack are provided to control emission in environment. A full-fledged environmental laboratory has been set up for regular monitoring of environmental parameters, inside the plant and outside the plant as well as monitoring of all equipment's and area's is being done by external agency registered with MOEF/CPCB/SPCB also. Regular preventive maintenance is being ensured.

The environmental attributes being monitored are as given below:

- Air pollution and Meteorological Aspects
- Water and Waste water Quality
- Noise Levels
- Soil Quantity
