* Tailing is a major waste material generated from beneficiation plant.

** All the dust slurry transported to process plant and utilized.

*** Used/Spent oil & Scrap lead acid batteries sold to registered parties with MoEF / CPCB.

PART – F (Format)

Please specify the characterizations (in terms of composition and quantum) of hazardous as well solid wastes and indicate disposal practice adopted for both these categories of waste.

- i. **Solid Waste-** The Solid Waste in form of tailings (Non-Hazardous) generated from beneficiation plant is- **3672073 MT** having following mineralogical composition

Particular	% Content
Total Lead	0.14 %
Total Zinc	0.20 %
Total Iron	3.5% - 4%
Insoluble	30 % - 35%
Cadmium	0.0085 %

Tailing is pumped to Dry tailing plant where water is separated from tailings and dry tailing cake having moisture around 15 to 18% is disposed in Tailing storage facility. Water thus separated is 100% recycled in beneficiation plant.

Installed hydro fill plant and paste fill plant to backfill the tailing in mine void.

Waste rock- Total generation – **1032264 MT**

The waste rock does not contain any minerals and are inactive rocks. This waste is dumped in open stopes of mines and also used in strengthening and height rising of tailing storage facility.

- ii. **Used oil**- Used oil is recovered from the different machinery and heavy earth movers. Used oil is stored in drums and kept in the specified area for disposal to registered re-refiners with MoEF/CPCB
- iii. **Discarded Containers and bags**- Discarded containers of chemicals are stored in the earmarked place, decontamination before disposal to TSDF.

PART – G

Impact of the pollution abatement measures taken on conservation of natural resources and on the cost of production:

Wet Tailing of beneficiation plant is being processed in Dry Tailing Plant to produce dry tailing of 15-18% moisture content, which is stacked in Tailing Storage facility. Water is reclaimed from Dry Tailing plant and is pumped back to beneficiation plant for reuse. Water requirement is met out by our captive Tidi Dam. The water requirement for process plant is meet out by 80% reclaimed water of tailing storage facility thereby reducing fresh water consumption.

PART – H

Additional measures/investment proposal for environmental protection including abatement of pollution, prevention of pollution.

The following works were completed to improve the working environment.

- Installed Hydrofill and pastefill plant to backfill tailings in mine void

Hydro Fill Plant

Paste Fill Plant

- Wet drilling operations continued.
- Transportation of concentrates in tarpaulin covered trucks.

Tarpaulin covered truck

- De-dusting systems at both the secondary crushers at Beneficiation Plant (Mochia & Balaria crushers).
- Installation of water sprinklers at Baroi and Mochia Mine Stockpile.
- Installation of water spray nozzles at Coarse Ore Stockpiles and other transfer points at Beneficiation Plant.

Mochia Coarse Ore Stockpile

Balaria Coarse Ore Stockpile

Unit is certified for ISO-9001:2015(QMS), ISO-14001:2015 (EMS), ISO-45001:2018 and SA-8000:2014 (Social Accountability)

Any other particulars for improving the quality of the environment:

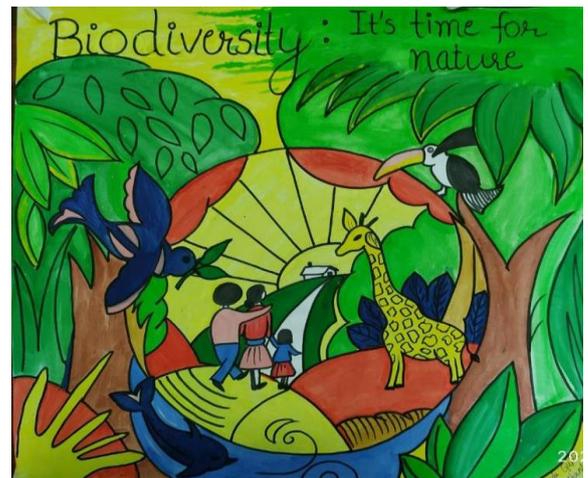

- 1. Air pollution control:** Dust extraction systems are in place for the crushers. Water sprinkling on ore while transportation and prior to crushing. Monitoring twice a month of ambient air at 8 locations and stack emission from stacks of crushing section for suspended particulate matter.
- 2. Water pollution control:**
 - a. Quality of mine water and ground water in and around the mine complex is being monitored regularly.
 - b. Wet Tailing of beneficiation plant is being processed in Dry Tailing Plant to produce dry tailing of 15-18 % moisture content, which is stacked in Tailing Storage facility. Water is reclaimed from Dry Tailing plant and is pumped back to beneficiation plant for reuse.
 - c. Reclaim water reservoir of 2,000 m³ capacity is used to prevent processed water from mixing to natural water source.
- 3. Noise and Vibration control:** Sound level for mining equipment's, beneficiation plant is regularly monitored. Use of blasting software for blast design and improvement in fragmentation. Ground vibrations are monitored on regular basis.
- 4 Plantation:** Land acquired for mining activity is 483.23 hectares, out of this 170.85 is having plantation. As part of Forest Compliance, preparatory work was started for carrying plantation in RDF-1 and RDF-2 scheme.

5 Expenditure: Year wise expenditure are reported to MoEF and its Regional Office at Lucknow. Total expenses during 2020-21 is **Rs. 4,88,75,903.**

6. Environmental awareness:

Several environment awareness activities are organized by Zawar Mines Environment Team. Plantation drive Conducted at various locations of Zawar Mines: Balaria Mines, Mochia Mines, Baroi Mines, Zawarmala Mines, Mill Office, VTC. Also, Various competitions were organised by Environment team- Posters, slogan and Nature Photography.

Also, conducted training programs on Environment rules and regulations, waste management and other environment management aspects.

7 Water Conservation Measures: By deploying various water conservation measures Zawar Mines maintains Zero Effluent Discharge status. Following activities are being practiced and will be continued for monitoring and maintain zero discharge:

- Recycling of mine water for mining and beneficiation process.
- Wet Tailing of beneficiation plant is being processed in Dry Tailing Plant to produce dry tailing of 15-18 % moisture content, which is stacked in Tailing Storage facility. Water is reclaimed from Dry Tailing plant and is pumped back to beneficiation plant for reuse.
- Sewage Treatment Plants (300 KLD & 150 KLD) for domestic waste water. Treated water is recycled in Beneficiation plant, surface exploration drilling, plantation etc.
- 2,000 m³ Reservoir to collect and recycle the water.
- Zero discharge is being maintained.
- Regular monitoring of ground water. High Rate Thickener installed to improve water recovery.

Recycling arrangement (storage cum pumping arrangement)

High Rate Thickener

Recycling Water Pump House

2,000 m3 Capacity Water Reservoir

Sewage Treatment Plant

8 World Environment Day Celebration: World Environment Day was celebrated on **5th June 2020**. Various competitions were organized, and prizes were distributed to the winners. Plantation was also done by participants at designated site.
